| Assessment undertaken by: Xisen Wang                                                                                                                                                                                                                                                                                                                                                          | Signed: Xisen Wang                                                            | Date: Nov 16th                      |
| Assessment Supervisor: Jindong Gu                                                                                                                                                                                                                                                                                                                                                             | Signed: Jindong Gu                                                            | Date: Nov. 16th. 2025               |

### Assessing the Risk\*

You can do this for each hazard as follows:

- **Consequences:** Decide how severe the outcome for each hazard would be if something went wrong (i.e. what are the Consequences?) Death would be "Severe", a minor cut to a finger could be regarded as "Insignificant".
- **Likelihood:** How likely are these Consequences to actually happen? Highly likely? Remotely likely, or somewhere in between?
- **Risk Rating:** Start at the left of the coloured Matrix. On your chosen Consequences row, read across until you are in the correct Likelihood column for the hazard in question. For example, an outcome with Severe consequences but with a Low probability of actually happening equates to a Medium risk overall. In this case "Medium" is what should be written in the Risk.

| RISK MATRIX  |               | LIKELIHOOD (or probability) |                  |                  |                  |
|--------------|---------------|-----------------------------|------------------|------------------|------------------|
|              |               | High                        | Medium           | Low              | Remote           |
| CONSEQUENCES | Severe        | High                        | High             | Medium           | Low              |
|              | Moderate      | High                        | Medium           | Medium/Low       | Effectively Zero |
|              | Insignificant | Medium/Low                  | Low              | Low              | Effectively Zero |
|              | Negligible    | Effectively Zero            | Effectively Zero | Effectively Zero | Effectively Zero |

### Overall statement of risk

- Carefully consider the risks associated with your project, the nature of the activity with which you will be engaged, and its location.
- Check the information from Health & Safety pages in the Intranet, including those specifically for the 4YP.

Tick 1 box; **Students must discuss these risks with their supervisor.**

☒ **Office work only:** My project involves only basic office work (paper and computers). It does not involve hands-on laboratory or field work of any kind. I am aware of the associated risks, including the health risks associated with the extended use of computers and display screens. No further assessment is required.

☐ **Low Risk:** I consider the health and safety risks associated with my project to be low, working in alignment with existing risk assessments and no further assessment is required. For example, collecting data from existing systems within a lab.

☐ **Medium Risk:** I consider there to be additional risks associated with my project as it requires risk assessment authorisation below:

Risk Assessments for Hazardous Substances & Biological Materials. The Biological & Chemical Safety Officer's (BCSO) signature is required for the final sign-off on Engineering Science COSHH Assessments. If the BCSO is unavailable, the DSO can provide this signature. For IBME, the IBME Safety Officer can provide this signature. The BCSO's signature is also required for risk assessments involving the use of biological materials.

Genetically Modified Organisms. Risk assessments involving genetically modified organisms require the BCSO's signature for the work to proceed. The department's Safety Policy refers.

Laser Risk Assessments: In addition to the supervisor of the laser equipment/experiment concerned, the Department Laser Safety Officer (DLSO) must also sign risk assessments involving lasers.

Where Specialist Safety Officers Originate Risk Assessments. Where the DSO or Specialist Safety Officers write, co-write or otherwise originate risk assessments, they will be required to sign and authorize such risk assessments.

**Requirements for review by specialists should be identified within Safety Requirements section on <https://fouryp.eng.ox.ac.uk/index.php>**

☐ **High Risk:** This is a high risk activity as identified by Specialist Safety Officers.

**Please review with Specialist Safety Officers; where Medium Risk, sign & ask your supervisor to countersign; then submit to Sharepoint site.**

**Signature of student:**

**Date:** Nov 16 Xisen Wang

**Signature of supervisor:**

**Date:**Jindong Gu

| Hazard ( <i>potential for harm</i> )                        | Persons at Risk | Risk Controls In Place ( <i>existing safety precautions</i> )                            | Risk | Future Actions identified to Reduce Risks ( <i>but not in place yet</i> ) |
|-------------------------------------------------------------|-----------------|------------------------------------------------------------------------------------------|------|---------------------------------------------------------------------------|
| Prolonged computer use → eye strain, neck/back discomfort   | Student         | Adjustable chair, proper lighting, regular breaks (20-20-20 rule), ergonomic workstation | Low  | Set break reminders; adjust monitor height if needed                      |
| Long periods of sitting / repetitive strain                 | Student         | Use of sit–stand desk where possible; guidance from DSE assessment                       | Low  | Incorporate short stretching routines                                     |
| Mental fatigue from extended coding/model-training sessions | Student         | Time management, pacing workloads, regular rest periods                                  | Low  | Schedule weekly check-ins with supervisor to balance workload             |
| Electrical risks from laptop/chargers                       | Student         | PAT-tested equipment; use of University-approved sockets                                 | Low  | Replace faulty cables immediately; avoid overloading extension leads      |
| Data security / loss of progress                            | Student         | Use of version control (Git), Oxford OneDrive automated backup, secure passwords         | Low  | Implement redundant local/cloud backups for project files                 |
|                                                             |                 |                                                                                          |      |                                                                           |
|                                                             |                 |                                                                                          |      |                                                                           |
|                                                             |                 |                                                                                          |      |                                                                           |
|                                                             |                 |                                                                                          |      |                                                                           |
